1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-4, is rejected under 35 U.S.C. 102(e) as being anticipated by Oishi (US 6,789,261).
3. Regarding Claim 1, Oishi shows (Figs. 1-9) a disk cartridge comprising:
a disk (22); a cartridge body housing (12) the disk to be rotatable and having formed therein a write and/read opening through which a part of the disk is exposed to outside in a range between the inner and outer radii thereof; a shutter member (16) supported movably on the cartridge body to uncover and cover the write and/read opening; and a two-way forcing mechanism (20) to force the shutter member toward any selected one of positions to cover and uncover the write and/or read opening.
4. Regarding Claim 2, Oishi shows (Figs. 1-9) the disk cartridge, wherein the two-way forcing mechanism (20) forces the shutter member (16) in any selected one of directions to cover and uncover the write and/or read opening correspondingly to a position of the shutter member relative to the write and/or read opening.

5. Regarding Claim 3, Oishi shows (Figs. 1-9) the disk cartridge, wherein the two-way forcing mechanism (20) is provided upstream of the moving direction of the shutter member (16) to uncover the write and/read opening.
6. Regarding Claim 4, Oishi shows (Figs. 1-9) the disk cartridge, wherein the two-way forcing mechanism (20) is formed from a return helical spring connected between the shutter member (16) and cartridge body.
